Tradex Active enables companies who send or receive only a few invoices to join the Tradex community and enjoy the full benefits from closer integration with customers or suppliers.

There are considerable benefits from being able to completely remove manual processes and paper documents from business processes. Progress is often hampered by the ability of many of your low volume trading partners to connect. Tradex Active is the answer.

### The challenge

Every day there are millions of trading documents exchanged on paper, each having to be re-keyed as they pass between buyers and suppliers.

Cost, time and environmental benefits have led to more companies moving away from paper and adopting electronic exchange for documents such as invoices and orders. Where the volume of transactions is small, this can be difficult for some suppliers.

Tradex Active has been developed by Causeway to provide a solution to this problem and allow all suppliers to adopt electronic exchange.

### The Solution

Causeway Tradex Active delivers to the smaller organisation the ability to comply with the demands of large customers to exchange invoices electronically without any start-up costs. All you need is an Internet connection and web browser.

The system is simple to set up and simple to use. To send an invoice, select the customer, enter the details using an on-screen template and click the send button. These invoices are then transmitted to the

customer in a format they can download into the back office system for approval and payment. As well as cutting costs for the receiver, the system gives greater visibility and predictability as well as streamlining the approval and payment process.

Users of Tradex Active can also send invoices to customers who are not full Tradex members. All that is needed is to know the name of your customer and an appropriate email address.

Should activity levels increase then a Tradex Active user can upgrade to a full subscription that allows transactions to be exported and sent directly from the back office accounts system.
